Your partner in secure communication and data integration

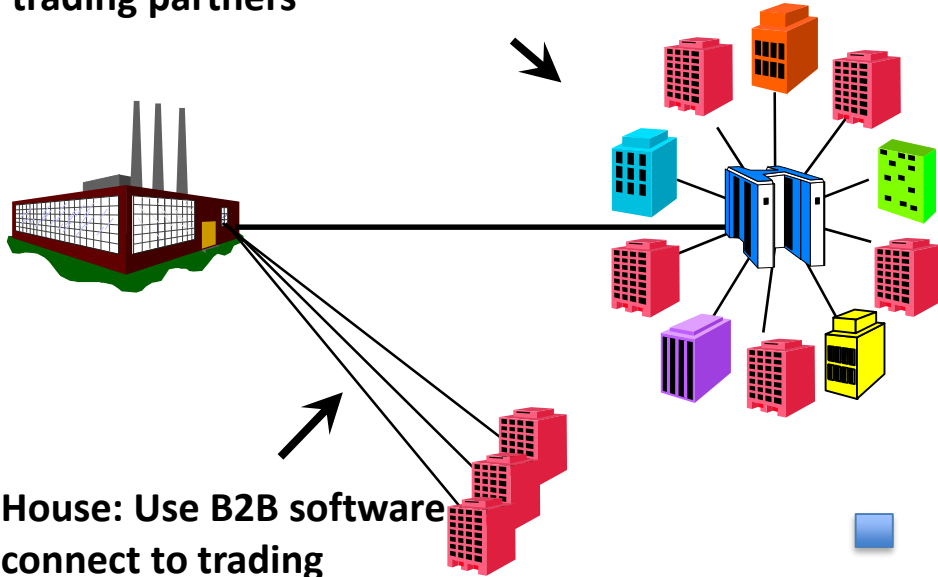

ECS International BV - already 19 years a professional solution provider in MFT and Data Integration solutions in EMEA.

“It is our passion to help organizations with data integration, - transformation and -communication challenges to meet your and your trading partners’ expectations”

ECS International BV - Solutions

Outsource: Use a B2B Cloud to connect to trading partners

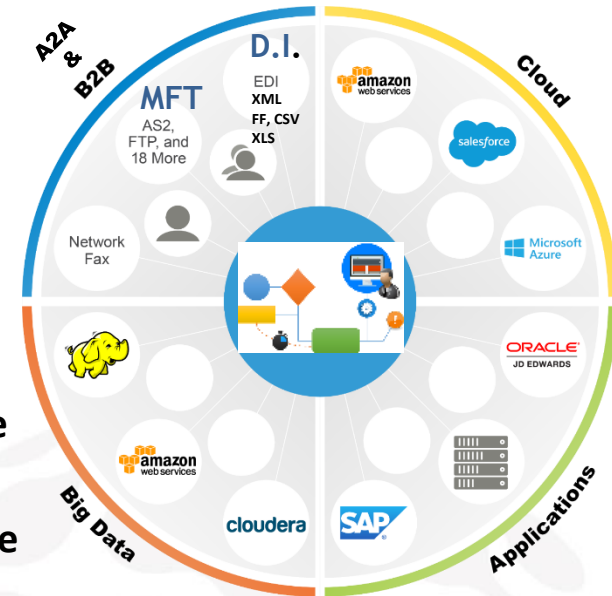

In-House: Use B2B software to connect to trading partners

 B2B as a Service

 MFT as a Service

*Anywhere You Want It!
..or Any Way You Want It!*

● iSHARE and ECS International

With iSHARE, organizations get access to a network of trusted parties.

With the solutions and services of ECS you can then exchange and integrate data securely, quickly and in a controlled manner.

Together we solve the main obstacles for data sharing:

- Costly and time consuming integrations thanks to an increasing number of partial solutions
- Lack of trust

End to end solution for fast and secure data exchange

iSHARE ensures the Identification, Authentication and Authorization of trusted partners.

ECS International supports iSHARE users with secure data exchange and data integration between all their trading partners and their internal (ERP/WMS/TMS) and/or cloud applications.

Communicate electronically quickly and securely with iSHARE partners as well as with parties that are not (yet) an iSHARE partner.

Business and technical benefits

- More standardization, so less 1 on 1 integrations
- Faster onboarding of trading partners
- Integration with both iSHARE partners and companies that are not (yet) an iSHARE partner
- Full control over who has where and when access to which data
- Compliant with legislation and regulations
- Detailed insight into and control over all data streams within and outside of your organization

The 5 ways to adopt iSHARE

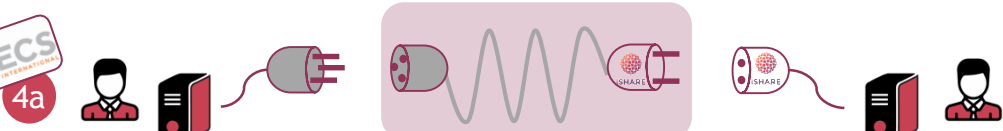

Your partner in secure communication and data integration

- 

1 **iSHARE on your own**
Party implements the iSHARE API(s) themselves
- 

2 **iSHARE by Implementation Partner**
Other party implements iSHARE API(s) for the party
- 

3 **iSHARE by Software partner**
Other party adapts its software to include the iSHARE API(s), for the party
- 

4a **iSHARE Software hub**
An integrator provides a hub that connects software without an iSHARE API(s) to software *with*
- 

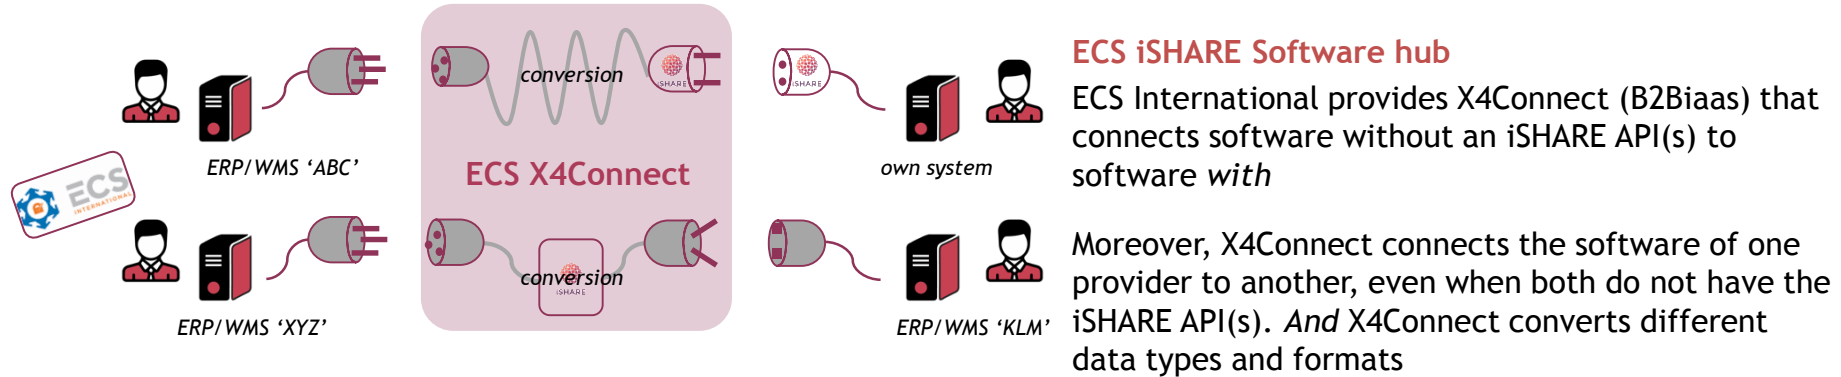

4b **iSHARE Software hub**
An integrator creates a hub that connects the software of one provider to another, while both do not have the iSHARE API(s)
-

ECS enables ERP / WMS Software users to enjoy iSHARE's benefits

Your partner in secure communication and data integration

ECS iSHARE Software hub

ECS International provides X4Connect (B2Biaas) that connects software without an iSHARE API(s) to software with

Moreover, X4Connect connects the software of one provider to another, even when both do not have the iSHARE API(s). And X4Connect converts different data types and formats

“The ECS International X4Connect platform now offers iSHARE integration. This means users of large software systems - such as SAP or Oracle - can enjoy the iSHARE benefits, without implementing the technical iSHARE standards (on its own or with the software partner).”

This means that ECS International’s clients do no longer need to make bilateral agreements about how to give each other access to data. With X4Connect, therefore, data sharing becomes easier and safer.”

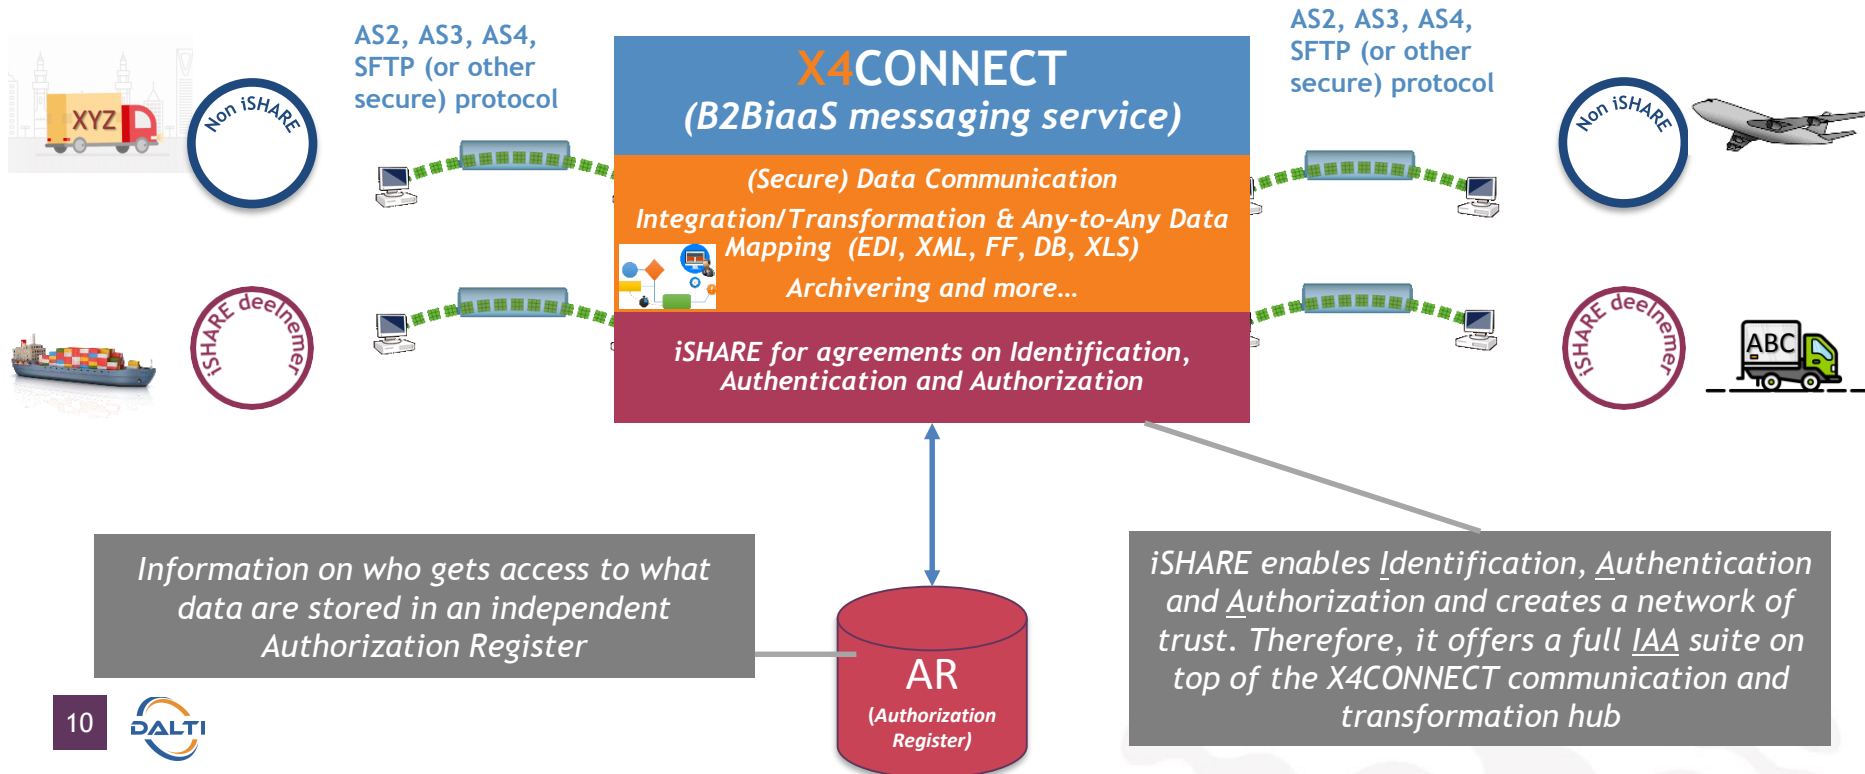

X4CONNECT enables your (secure) data transformation & communication

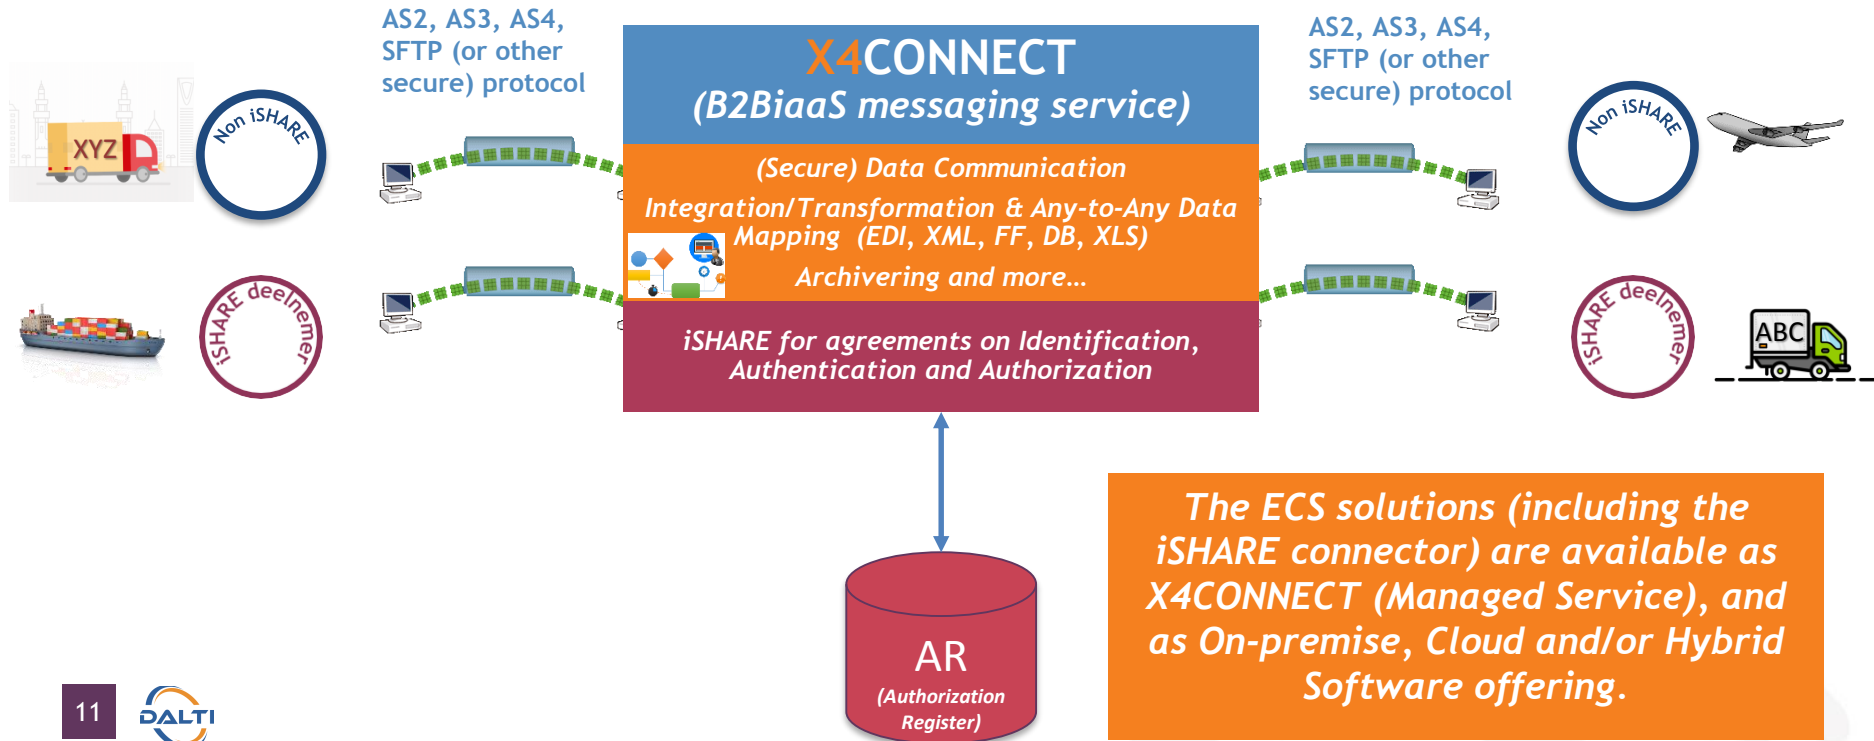

“The ECS International X4Connect platform now offers iSHARE integration. This means users of large software systems - such as SAP or Oracle - can enjoy the iSHARE benefits, without implementing the technical iSHARE standards (on its own or with the software partner).”

This means that ECS International’s clients do no longer need to make bilateral agreements about how to give each other access to data. With X4Connect, therefore, data sharing becomes easier and safer.”

X4CONNECT with iSHARE is a solution, on with WHOM to share WHAT data HOW

All ECS users can enjoy iSHARE benefits, without an extra technical integration
